

Agent Git Lab Teams - one-pager

Problem: Bootcamp operators lose weeks to Git and GitHub onboarding friction. Learners stall before their first meaningful pull request.

Solution: Team portal plus Agent Git Lab learner paths with qualified-action metrics. Operators create a workspace, share a launch link, and track cohort progress.

Market: Bootcamps, university cohorts, internal academies (SAM ~\$780M in NA/EU cohort-based programs).

Traction: Production cohort stack (PM, comms, showcase, learning app) shipped by RAVEN (@raven-dubgub) during Hult Cohort Developer Program.

Business model: Starter \$49/mo per cohort (≤ 30 seats) · Pro \$149/mo (≤ 120 seats, analytics export, priority support).

Go-to-market: Founder-led outreach to bootcamp directors, demo days, GitHub Education partners. Target three pilot operators in Q4 2026.

Ask: Pilot partnerships, angel intros, and \$250k pre-seed to hire the first customer success lead.
