

Agent Git Lab Teams

Team onboarding for bootcamps that need Git and GitHub fluency without rebuilding PM, comms, and learning tooling from scratch.

Problem

Operators juggle Discord, Notion, and one-off Git workshops. Learners lose the first two weeks to tooling setup and stall before their first meaningful pull request.

Solution

A team portal plus Agent Git Lab learner paths. Operators create a workspace, share a launch link, and track qualified learner actions from one place.

Product demo

Sign up, create a cohort workspace, and launch learners into guided Git lessons. Qualified actions feed a public metrics snapshot for operators and investors.

Market

Coding bootcamps, university cohort programs, and internal academies training agent-first developers. SAM ~\$780M in North America and Europe cohort-based programs.

Competition

GitHub Education bundles, Codecademy for Teams, and custom LMS stacks. Our wedge: cohort-native workflows, agent-assisted lesson paths, and a production stack already live.

Business model

Starter \$49/month per cohort (≤ 30 seats). Pro \$149/month (≤ 120 seats, analytics export, priority support). Annual prepay: two months free.

Traction

RAVEN shipped the Hult cohort stack in production: PM, comms, showcase, and the Agent Git Lab learner app. Venture metrics run in a separate namespace.

Go-to-market

Founder-led outreach to bootcamp directors, demo days, and GitHub Education partners. Target: three pilot operators in Q4 2026.

Team and ask

RAVEN (@raven-dubgub): full-stack builder, cohort PM/comms/showcase/learning apps shipped solo with agent workflows. Seeking angel intros and \$250k pre-seed to hire the first customer success lead.
